## Education

### Worcester Polytechnic Institute

*Master of Science in Robotics Engineering*

Aug 2022 – May 2024

Worcester, MA

### Rose-Hulman Institute of Technology

*Bachelor of Science in Mechanical Engineering*

Aug 2015 – Feb 2019

Terre Haute, IN

## Professional Experience

### MathWorks

*Software Engineer Intern*

May 2023 – August 2023

Natick, MA

- Crafted a **C++** test infrastructure leveraging **Google Test** fixtures to automate the management of **Redis** server lifecycles within a Continuous Integration/Continuous Deployment (CI/CD) pipeline.
- Engineered a **multi-process handshake protocol** to safeguard against Redis process drooling in case of a test crash.
- Established **cross-platform** testing capabilities spanning a range of operating systems.

### DEKA Research & Development Corp.

*Control Systems Engineer—Autonomous Driving for Delivery Robot*

Mar 2019 – Mar 2022

Manchester, NH

- Designed and implemented a **Model Predictive Controller (MPC)** in **C++** for trajectory planning and obstacles avoidance. (Tested over 1000 miles on real world sidewalks)
- Adapted global and local **optimization algorithms** to find optimal solutions towards global minima.
- Introduced a parallel computing algorithm with **CUDA** to calculate an Euclidean distance map for collision checking. (Achieved 60% calculation speed increase for  $1024^2$  occupancy grid.)
- Spearheaded the design and execution of an **automated data collection** pipeline for on-demand data acquisition with **Robot Operating System (ROS)**.
- Initiated and orchestrated the design and implementation of a multi-controller framework, enabling on-demand rapid controller switching through the utilization of **multi-threading** and shared memory techniques.
- Customized **RVIZ** for engineer-centric debugging and utilized **Foxglove** for customer-facing demonstration visualization.

## Projects

### Monocular camera traffic scene regeneration | *Python, PyTorch, JSON, Blender*

Apr 2023

- Applied Cross Layer Refinement Network (CLRNet) and Bezier curve fitting techniques to execute lane detection.
- Adopted YOLO-V7 for traffic scene objects detection. (car, truck, bicycle, motorcycle, person, traffic signs...)
- Utilized Deep Learning in conjunction with geometric constraints to estimate the 3D pose of the detected objects.
- Estimated pedestrian 3D poses by leveraging a 3D Human Pose and Shape Regression algorithm. (PyMAF)
- Automated traffic scene reconstruction through JSON intermediate representation and Blender scripting.

### IMU quaternion attitude estimation | *6-DoF IMU, Madgwick Filter, UKF*

Sep 2023

- Implemented quaternion-based attitude estimation for a 6-DoF IMU, employing both the Madgwick Filter and Unscented Kalman Filter (UKF) algorithms.
- Conducted benchmarking of attitude estimation against ground truth data obtained from Vicon motion capture system.

### 3D scene sparse reconstruction with structure from motion

Mar 2023

- Extracted and matched monocular camera image key features using SIFT descriptors and RANSAC algorithm.
- Computed the fundamental and essential matrices based on epipolar geometry.
- Determined the camera pose from essential matrix and ensured Cheirality Condition compliance through triangulation.
- Aligned multiple images (camera poses) utilizing both linear and non-linear Perspective-n-Point (PnP) algorithms.
- Performed scene reconstruction using bundle adjustment, aided by the visibility matrix.

### Multi-agent path finding | *ROS, PyGame*

May 2023

- Computed optimal collision-free paths for scenarios involving more than 50 agents on a 128x128 grid map using both the Conflict-Based Search and Symmetry Breaking Conflict-Based Search algorithms.
- Created a custom PyGame simulator compatible with ROS (actionlib) to facilitate multi-agent pathfinding.

### Photorealistic scene reconstruction with NeRF | *PyTorch*

Mar 2023

- Implemented the original neural radiance field (NeRF) paper using the PyTorch framework.
- Reconstructed self-collected scenes using NVIDIA's Instant-NGP NeRF pipeline.

### Monocular camera calibration | *OpenCV, Python*

Feb 2023

- Applied Zhang's method to estimate monocular camera focal length, distortion coefficients, and principle point.
- Utilized OpenCV to perform corners detection for checker board calibration pattern.
